**T&T MARINE  
COMMAND AND  
CONTROL UNITS**

# COMMAND AND CONTROL UNITS

T&T Marine owns several command and control units, all of which were designed and converted by T&T.

CC1 – 53’ unit with 60’ telescoping antenna, three cellular phone/fax lines, 6 land line connections with remote connections for other units, UHF/VHF/aircraft radios, repeaters, wireless internet access through built-in satellite system, satellite TV and copy machines.

CC2 – 44’ unit with 50’ telescoping antenna, three cellular phone/fax lines, 6 land line connections, UHF/VHF radios and copy machine. This trailer has phone and satellite connections for use with CC1. The rear of the unit is stocked with response supplies.

CC3 – 20’ unit with VHF radios. This trailer is used independently on small responses and has phone and satellite connections for use with CC1.

In addition to the command units T&T also has a portable surveillance camera capable of wireless transmission of real-time video. Depending on the terrain, this transmission can cover over eight miles. The wireless control enables the operator to control pan, zoom and tilt on the camera. The camera can be mounted on one of T&T’s portable telescoping antenna trailers or placed at any location using T&T’s portable control boxes.
